Editorial

Surface chemistry either by formation of covalent or non-covalent bonding in the different chemicals surfaces has recently attracted a lot of attention: This is because some chemical materials which are inert or are not useful normally can be made useful by surface modification which brings in different chemical species as in the original chemical material. Surface modification therefore increases hydrophobicity, hydrophilicity, roughness, surface charge, surface energy, biocompatibility, reactivity, etc. In this issue both covalent and non-covalent surface modification on graphene and carbon nanotube are being reported for various applications in nanomedicine, nanoelectronics, nanonergy, etc. The journal keeps to her tradition of publishing high quality research in the area of nanoscience and nanotechnology.

My sincerest appreciation to all the editors especially who made this possible for publication. I use this time to welcome Dr. Simona Schwartz; a scientist at the Leibniz Institut für Polymerforschung Dresden, Germany and Professor KD Verma, S.V. (P.G.) College, Aligarh, India to the editorial board.
