Editorial

Molecular beam epitaxy (MBE) produces ordered pure films for unique application in nanoelectronics as semi-conductors nanowires. In this edition of the journal, synthesis of nanowires by MBE is being reviewed to explore their potential applications in electronics. Further, this review presents a comparative study of MBE over traditional chemical vapor deposition. Geometry and its implication to application is also reviewed.

Carbon nanotube because of its potential application is also being reviewed. The journal continues its objective to publish high quality research and reviews in the area of nanoscience and nanotechnology. The effort of all the authors along with all the editors who made this edition possible is highly appreciated.
